# Entando Innovation Labs

Entando is the leading micro frontend platform for building enterprise web applications on Kubernetes.

Entando Professional Services helps your team in getting the best value out of Entando 6 by understanding your business and technical challenges helping you in making the best decisions to achieve project success. Our team will help you to review and validate your design to avoid unexpected issues and identify potential risks.

Entando will support you across all aspects of your business providing guidelines and recommendations to enable your growth and accompany you on your digital journey.

What will you get?

- A working POC for your environment
- Understand Entando's Kubernetes-native infrastructure
- A CI/CD development pipeline to deploy a micro frontend and microservice in your environment
- A robust methodology on how to design, manage, and deploy apps in a Kubernetes environment
- Production ready code in a containerized app built using micro frontends and microservices
- Reference architecture for how to build modern apps on Entando 6
- A summary document with recommendations on methodology and Kubernetes deployment best practices for your environment
- (4-week package): Hands-on implementation support on how to change the way you develop modern frontend applications to leverage the power of micro frontends

Benefits

- Understand your business and your existing technological landscape
- Kick off your Entando upgrade on the right foot
- Identify the best approach to overcome the technical challenges specific to your case
- Support you with best practices and past industry experience.

Get Your Project Up and Running Quickly

At Entando, we understand the importance of getting your project out on time. The end result of this package is a working POC for your environment where your team is ramped up and ready to develop on kubernetes and micro frontends much faster compared to studying and learning everything on their own. The standard 2-week innovation lab is designed to ramp up your team and deliver a working POC fast. For extended in-person support for the first phase of your project, upgrade to our 4-week innovation lab.

A New Way of Doing Things Requires New Processes

With Kubernetes, you can fully automate the management of servers and containers in production. And micro frontends empower parallel development teams that can release independently on the same codebase. But developing on Kubernetes and transitioning from a monolith can be hard. Entando Innovation Labs helps enterprises gain the benefits of Kubernetes and micro frontends, and reduces the complexity of developing apps on Kubernetes. We provide a standard methodology on how to develop apps as micro frontends and microservices, and make it easier to develop on Kubernetes by mimicking the standard development lifecycle that developers are used to.

About Entando Professional Services

Entando's Professional Services team works with customers to foster success in their digital journey. As a global team with extensive experience in a variety of industry sectors, such as telecommunications, e-commerce, travel, and digital entertainment, Entando Professional Services guides you through critical milestones and decision points, augmenting your team and providing support or ownership of governance, architecture, infrastructure, delivery and training.
